

Front site structure and content management

The Blog System front site is powered by a limited in functionality version of WebSiteAdmin 2.1 (<http://www.websiteadmin.biz>). WebSiteAdmin allows the administrator to manage the website structure and content with an user friendly interface. You may find below the answers of some basic questions related to the blog front site structure management.

1. How to change the front site pages meta title and description?

In order to do this, you need to login to the back office as administrator and go to the Website->Management page. On this page, you'll see the available website pages as a tree. You have to left click with the mouse on a page in order to select it and then right click with the mouse and select from the Context menu which will show up "Page Settings".

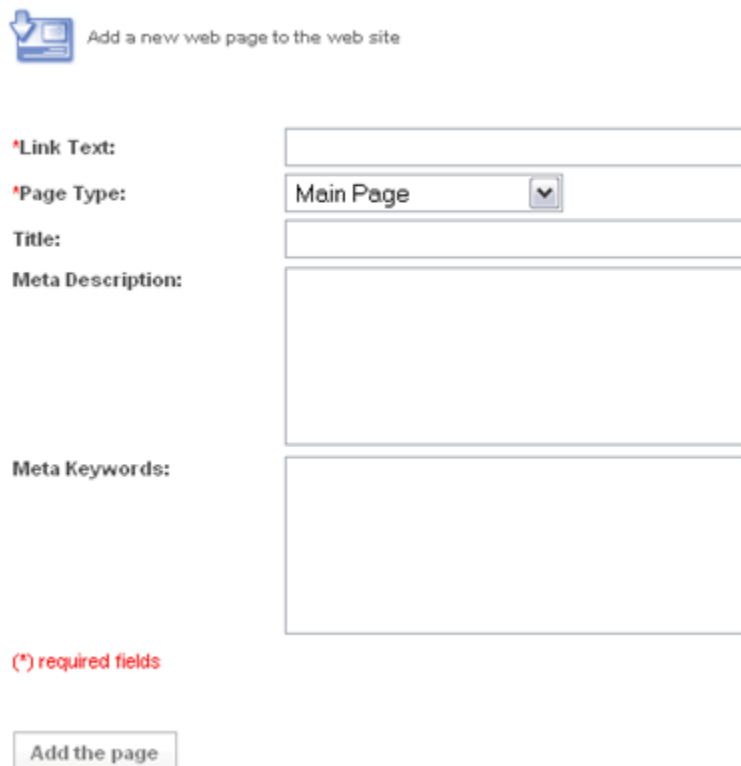

A new page will show up containing various page fields including also the page meta title description. You need to enter the new values and click Save.

2. How to add a new page to the website?

WebSiteAdmin offers you the possibility to freely edit the website structure – add, edit or delete the pages of the front site.

Please note that you need to define the website structure separately for the different language versions available (you could switch between the language versions by clicking on the corresponding flags in the back office)

In order to add a new page to the front site you need to use the form located at the bottom of the Website->Management page.

 Add a new web page to the web site

*Link Text:

*Page Type:

Title:

Meta Description:

Meta Keywords:

(*) required fields

3. How to change the pages hierarchy?

You can modify the front site pages structure using the form at the bottom of the Website->Management page.

Make:

Home* Page
Home* Page
Signup* Page
News* Page
FAQ* Page
Help* Page
About* Page
Contact* Page

A product of **NetArt**MEDIA®

4. How to change the position of two pages?

By changing the position of 2 pages, you'll change the order of the pages in the main navigation menu (for example replace the positions of the Home and About us pages).

Near every page on the Website->Management page, you could see 2 red arrows indicating the up and bottom directions, you have to click on them in order to change the position of the pages.

Please note that you can change the position of 2 pages only if they are on the same level in the website hierarchy (for example main pages, or sub pages of the Home page etc.)

5. How to change the front site main navigation menu style?

You could choose between 2 main types of menus for the front site navigation menu. In order to switch between these types, you need to go to the Website->Navigation menu page.

Please choose the menu type to use:

-  **Standard** [Settings]
-  **Customized menu** [Settings] [Construct/Modify]

Save

The standard menu provides you the possibility to combine texts, styles and images and manage with ease complex multi levels menus.

The settings of the standard menu could be managed from the Standard menu-

>Settings page in the back office.
